Early Contributors & Founders

Founders have 2 years vesting with, 6 months cliff.  
Early contributors have 6 months vesting with, 3 months cliff.

## Investment Opportunity

### What We Do?

We are the first borderless, shared economy and pay it forward orientated platform that will give people the possibility to generate new sources of income outside the formal financial system and at the same time to generate a new way of trade-off pay it forward economy. New abilities that will be necessary for the upcoming future.

### Need/Opportunity

With high robotic technology and automatization processes we are about to face a close future with odds of having a huge negative social impact followed by a high unemployment rate if we don't manage to adapt to this changes.

We need to comprehend that this technological revolution is part of a global evolution and that we, humans, need in order to evolve into a new level of positive coexistence. For two main reasons:

- a) Avoid common errors and fraudulent or corruptive behaviors;
- b) The jobs that will be automated are the kind of jobs that nobody is really passionate to do.

### Solution

A proactive virtual assistant that will give people the possibility to give or receive a hand in every aspect of their life without any censorship, fraud or third party interference. By integrating innovative technologies such as blockchain, ethereum and lightning network to our day to day life we can start to build a new shared economy by effectively combining daily human interactions with secure decentralized immutable transactions held by peer to peer payments around the globe.

### How we are different?

We believe that in order for people to be completely happy they have to be able to connect with their inner self and with others. Hands enables this through a proactive A.I. that endeavors to understand the current situation of the user, based on their abilities, interests, needs, age, psychological profile and context. In this way we can generate an accurate coincidence between users allowing them to experience more authentic and successful connections in every aspect of their lives.

## Current Progress

- Beta version finished
- App Android completed
- App iOS 30% to be complete
- Stage is pre rollout
